

Bridging the Gap: Uniting Diverse Talent with the Merck Scientific Community

EMERGING TALENT SYMPOSIUM

NOVEMBER 4 | VIRTUAL EVENT

<https://emergingtalent.planetconnect.com/>

It is our pleasure to announce The Emerging Talent Symposium! This year, for our inaugural event, the symposium will be held virtually on **Thursday, November 4th**. Merck is excited to host a symposium for future scientific leaders to showcase their talents, where we will focus on students from diverse backgrounds with a variety of experiences to draw on.

This meeting is an excellent opportunity for students studying in STEM fields, at undergraduate and graduate levels, to network with scientists across several organizations within Merck Research Labs. There will be opportunities to discuss research and science, learn about possible career paths at Merck, meet with recruiting teams, and begin relationships with potential mentors. This is also an opportunity for Merck scientists to engage with bright and passionate students who have the potential to be the future talent within our company.

Select students will be identified to share science in the form of podium and poster presentations. Everyone will have the opportunity to meet and engage with other students and scientists at various stages of their career and learn about what it is like to work in pharmaceutical research and development.

<i>Application Opens</i>	<i>August 17th, 2021</i>
<i>Applications Close</i>	<i>September 24th, 2021</i>

REGISTER NOW!

Key Elements of The Day Will Include:

- Keynote Speaker from one of Merck Research Laboratory's (MRL) top leaders
- Presentations from exceptional students
- Roundtable discussions with Merck scientists
- Career Advice and Networking
- Poster sessions and small group discussions
- Building relationships to develop the next generation of scientists

Presentation and Poster Session Topics

- Drug delivery and devices
- Formulation development
- Process development
- Analytical characterization
- ADME and PKPD in drug discovery and development
- Translational science
- Immunogenicity risk
- Pharmacology and pharmacometrics
- Bioanalysis
- Safety pharmacology
- Toxicology
- Pathology
- Lab animal medicine, comparative medicine, and husbandry
- Toxicokinetic
- Disease areas and therapeutics
- Biology
- Chemistry/biochemistry
- Chemical and bioengineering
- Data Analysis
- Computational simulation
- & More!

Please visit our site <https://emergingtalent.planetconnect.com/> to register for this event and start the application process if you wish to showcase your work. Also, stay informed about important deadlines, agenda updates, and more!

We look forward to seeing you there!
