Isabel Perez https://www.linkedin.com/in/xip/

Education

- B.S. in Biomedical Engineering, Rutgers University, 2016
- M.Eng in Biomedical Engineering, Rutgers University, 2019
- Ph.D in Biomedical Engineering, Rutgers University, 2022

Extracurricular Experiences (Graduate School)

- BioEngineering Student Society (BESS)
- Society for the Advancement of Chicanos/Hispanics and Native Americans in Science
- STEM Community Outreach Symposium at Rutgers (STEMcosR)
- iJOBs

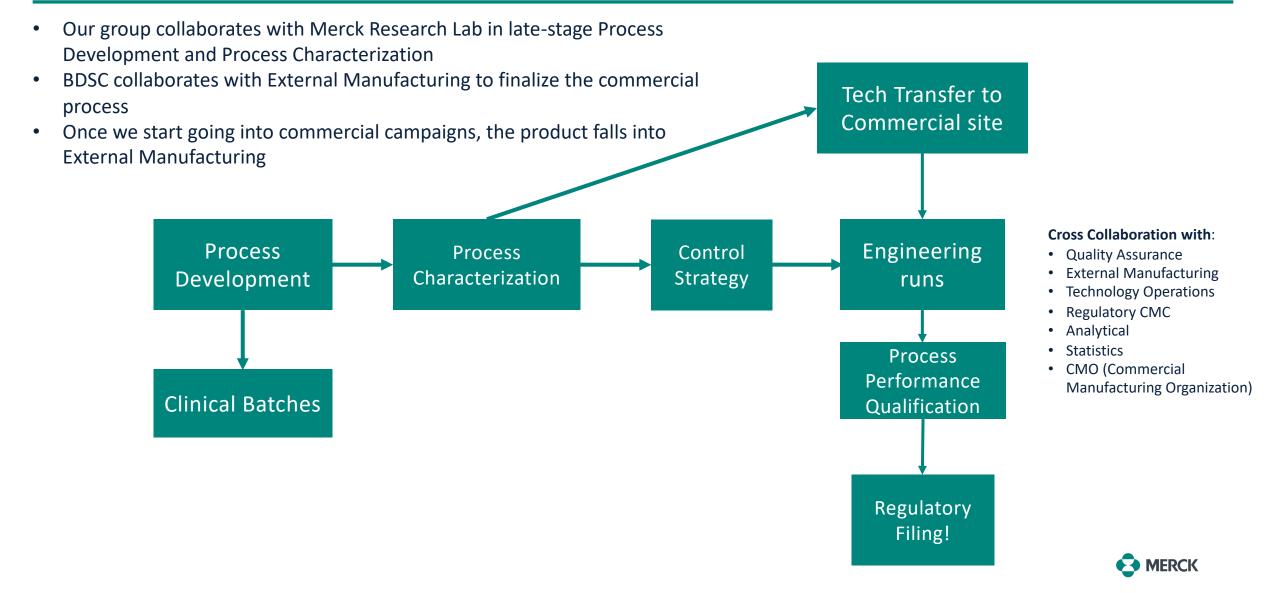

Industry Experience

- Process Engineer Co-Op, Parenteral MS&T, Bristol Myers Squibb, Jul 2019- Dec 2019
- Senior Scientist, Engineering, Bioprocess Drug Substance Commercialization, Mar 2022- Present
 - Currently Upstream Process Sciences Lead for late-stage mAb product

Proprietary

Cell Culture and Fermentation Sciences, Bioprocess Drug Substance Commercialization

Some Advice:

- If you have the opportunity, do an internship or extracurricular activity. It's easy to get pulled into lab, but if you want to break into industry, additional experience will help you with developing soft skills. And it makes you stand out as having industry or leadership experience (the market can be competitive).
- Apply for a job, even if you don't meet all the requirements. The worst that can happen is the application gets rejected. I applied for an associate director position in my current group and received a phone call saying I wasn't qualified for that role, but there was another role I was qualified for. And I got the job ^(C)

Monal Dieterich, PhD

monalgmehta@gmail.com

https://www.linkedin.com/in/monal-mehta/

Path to current role

- Finished PhD in neuroscience in March 2021
- Interested in scientist positions at a biotech or pharma company with a neuroscience focus
 - Started applying to scientist level positions all over the country in January 2021
- Job was looking for a specific skill set, iPSCs to model neurological disorders
 - This was the primary focus of my dissertation, had many transferrable skills relevant to the job
- Started job in April 2021

Current role: Scientist II at PTC Therapeutics

- Biology team lead for a preclinical neurodegenerative disorder
 - Overseeing all biological assays from screening tiers to mechanism of action studies
 - Working closely with chemistry and pharmacology teams to progress top small molecules to in PK, PD, and efficacy studies
- Lab work (10-15%)
 - Designing in vitro assays in a therapeutically relevant model system (patient derived iPSCs) to test small molecules
 - Exploratory work to test new targets for early preclinical programs
- Hiring manager for 4 employees

Advice to current trainees

- Know the market (employee vs employer driven)
- Tailor resume/CV to the position, hiring manager shouldn't have to dig
- Always submit a cover letter
- Given the current market... don't apply for positions you are overqualified for
- Conduct informational interviews with individuals currently in the role you desire

Joe Sherba Career Journey joseph.sherba@legendbiotech.com

- Education:
 - Undergrad → Penn State University (2009-2013)
 - Major: Biomedical Engineering, Chemical Engineering Track
 - 1st exposure to Research → Tissue Engineering (Electrospinning of Scaffolds)
 - Grad → Rutgers (2014-2020)
 - PhD in Biomedical Engineering
 - Thesis: "Towards the development of a continuous-flow, smart microelectroporation technology to advance cell therapy"
 - Fellowship Year (I think 3rd year?) → GAANN Fellowship → Precision and Personalized Medicine Focus
 - 1st real exposure to oncology / CAR-T Therapy
- Industry:
 - Legend Biotech → Cell Therapy (specifically CAR-T)
 - Scientist, Process Development (2020)
 - (Masters student I trained referred me)
 - Scientist II, Process Development (2023)

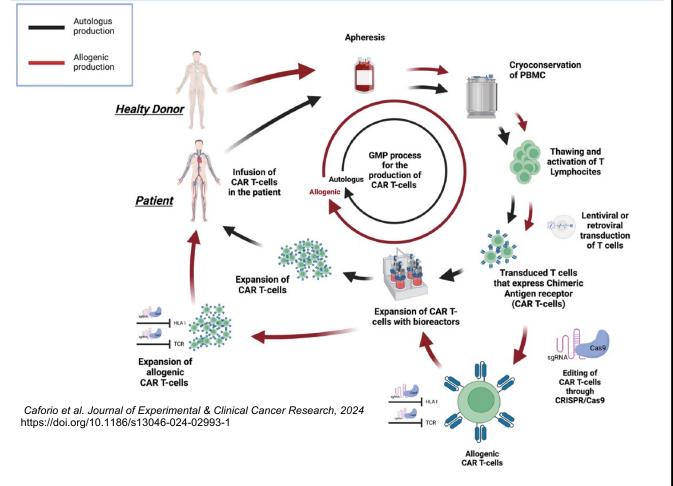

(Late Stage, Pre-Clinical R&D)

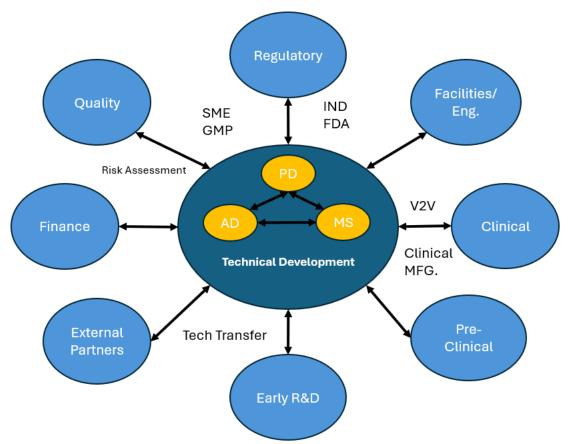

Major Focus as a PD Scientist:

- Optimize / Understand our CAR-T Drug Product Manufacturing Process(es)
- Take R&D Process and 'GMP-enize' \rightarrow Package to FDA
- Kick-off and oversee clinical manufacturing

Highly Collaborative Environment:

- Internally (Tech Dev), w/ Analytical Dev. and Material Science.
- Externally, numerous groups (both within and external to Legend)... we are also not the 'center of attention'
- **Key Roles**: Tech Transfers (internal/external), serving as SME (Quality / Regulatory), overseeing clinical manufacturing

Advice for iJOBS Trainees:

- Landing a Role:
 - Give yourself time
 - Network!
 - Reach out to people (strangers), talk to them, get referrals
 - Focus on the Company / Role.
 - Transferable Skills!
 - Group Interview \rightarrow Who are you?
 - Include a slide together (w/ Pics) about yourself and what you like to do outside of work
- Transitioning to and (hopefully) excelling in Industry R&D:
 - Ask questions (so many acronyms)
 - Effective Communication
 - Don't let things get lost in translation \rightarrow Unnecessary *Timeline* delays
 - Apply your PhD experience to describe study designs and to organize/communicate findings
 - Don't get too 'emotionally invested' in a specific project
 - Make yourself an Asset!
 - Continue to learn / grow... take on activities *outside* of your job description or specific **project**

Career Path

| 2008 - 2011 | 2012 - 2021 | 2021 - 2022 | 2022 - |
|--|--|---|--|
| Johns Hopkins University Master's Degree (M.Sc. Molecular Microbiology & Immunology) Research Assistant (Malaria research) Visiting Scholar (Schistosome research: field and lab work: funded by Global Health) | Rutgers University Scientist (DNA repository) PhD Degree (Physiology and Integrative Biology) Program Co- Ordinator (USAID- funded program) Postdoctoral Fellow (2 post- doc trainings) Postdoctoral Teaching Fellow (Rutgers University Honot College) | Scientist (Assay development and qualification) Method transfer to Quality control Collaborating with Process | Senior Expert (CAR-T, Cell and Gene therapy, Analytical Platform Development, |

Current role as Principal Scientist at Novartis

Own and drive technical and development projects to test and characterize cell therapy products

Design and develop complex molecular, cellular characterization, cell-based, and multi-color flow cytometry assays for cell therapy products

Presents results and project updates to team

Demonstrate strong scientific leadership and deep understanding of method suitability for Quality Control (QC) implementation

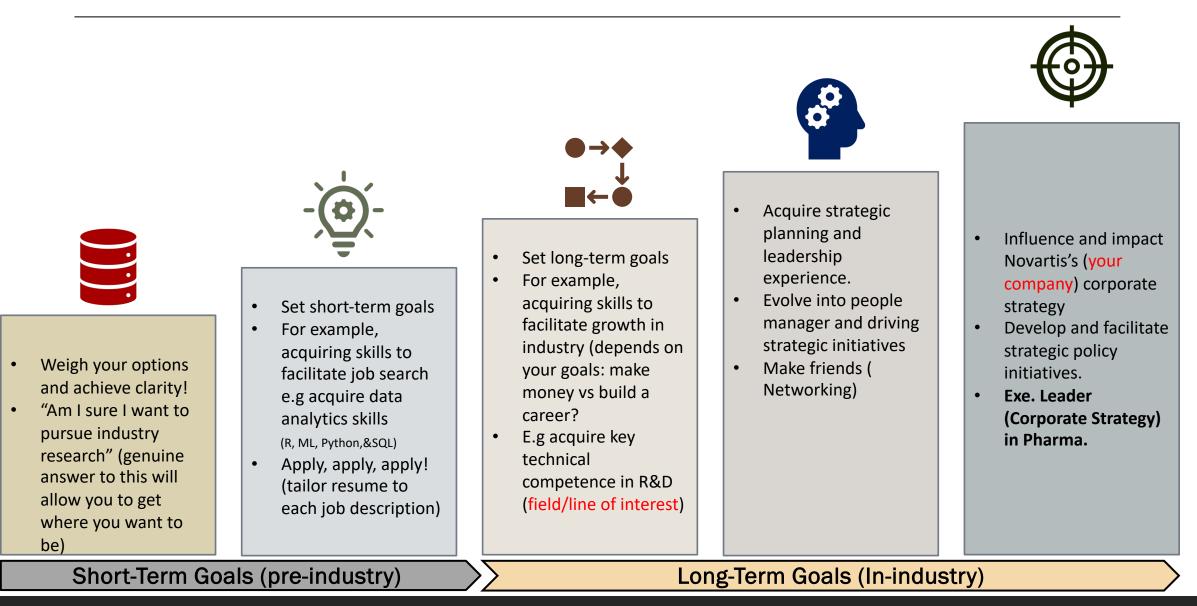

Actively keep abreast with the latest advances in nextgeneration analytical technologies for cell therapies

Continuously identify opportunities for method improvement and technical challenges Collaboratively lead, drive, and execute qualification/optimization/tra nsfer of analytical methods to aid in driving project timelines and deliverables into QC lines functions

Author and review method related documents to ensure completeness, accuracy, consistency, and clarity

Review and approve data by other team members. Support programs which assist in testing, evaluation, and monitoring of quality and efficiency

Formulation/Drug Product Team

- Formulation/Drug Product is part of Process Development (PD).
- As PD group we collaborate across AMGEN functions to ensure a smooth and efficient end to end process.
 - For example, we work with R&D as the drug evolves; from discovery, pass clinical trials, and beyond ensuring that molecules move across the pipeline.
 - We work collaboratively; from a small-scale process to fulfil clinical trials towards manufacturing and commercial.
 - During development we work with commercial operations and contribute to regulatory filings.

Pieces of Advice when Preparing for Careers in Industry

- Take your time to understand what section of the industry calls you
 - Research
 - Discovery, Protein Engineering, Pharmacokinetics, Biologics vs Small Molecules, Computational, etc.
 - Development
 - Process Development, Device Development, Engineering, Analytical Sciences, etc.
- Gain relevant experience during graduate school
 - Understand the needs of the role(s) of interest
 - Apply for internships
- Understand how to leverage your expertise
 - Your skills and training could have an impact on changing patient's lives
 - During an interview be ready to speak about your research experience and how it translates to the position
- Network
 - Connect with people to understand their role
- Leverage transferable skills
 - Problem solving, data analysis, communication, etc.
